#### **NARRATIVE FIELD TRIP REPORT**

The Regional Assembly for Information Technology held at NUEST in Nueva Ecija where COMTEQ Computer and Business College participated. From 1st year to 4th year are all present and ready to empower their skills with the respective competitions and seminar waiting for them at the PSITE. With the theme of IT Beyond Tomorrow: Shaping the Digital Frontier where it encourages youth to use technology with right behavior and could get new knowledge about the intelligence we have in this time.

At the exact time of 3:00 am the entire COMTEQ College Department prepares their departure to Nueva Ecija using the 2 Saulog bus with the total of 4 hours of travel time from Olongapo to Nueva Ecija. As one of the competitors in Asian Pop Dance we were able to set our minds for possible outcomes for our upcoming performance. With the help of Mr. Noel Marcelino our coordinator, we got to prepare the right time with minimal casualties but found solution right away.

When reaching the NUEST, we the performers started to do reblocking at their stage as we found out that their stage is a bit thin than we have in our rehearsal. From the other side, the rest of the CCS Department started to make next preparation for their own competition like the quiz bee and lanyard designing. We also explore some of the establishment at NUEST to look for a better place to practice our dance for the last time. Until the time reached where other school starts to arrive on time.

All the professional speakers discuss the risks of AI and new technologies that can make a person dumb or smarter depends on how they use it. We need to be adaptive that can find us our true purpose with the help of this seminar and how we relate to IT world without being abusive to it. The time is set where we got to perform our piece Infront of the hundreds of students from Central Luzon, honestly there are bit of nervousness and anxiety I felt but with the help of my groupmates we got through it without leaving each other in the air. The entire COMTEQ College cheered for us and we heard it from the stage that's why we are thankful for their presence to be there.

All the things I experienced the ups and downs, all the depression and panic it brought to me while preparing the dance to issues and conflicts from every members, we got to put ourselves out there and we can promise that we will be proving ourselves again next year. Being in NUEST and Nueva Ecija made me realize some points in my life, some people will come and leave us hanging- leaving the entire group grasping for hope to make it better again but we got to find ourselves and perform it without any more problem besides of the nervousness and depression I felt because of how long we reach and all the people that look down on us we got to show them what we can do. No matter what they say and speak at least we got to represent the school in a big stage.

It's a rollercoaster of emotion and until now, I can't get over from everything. Still fighting and chasing the dream of dancing because of lesson I learned from this seminar and I got to prove to myself that I can't depend on anyone rather than trusting myself and to the people who trusted me on doing my best. PSITE 2025 compared to the old seminars held at Pampanga, it opens my eyes to new possibilities and the reality of life, not just only in technologies and other things but all the things I've gone through along with my dance mates it became an inspiration for me to move forward and never look back.
