

Odoo platform as the basis of ERP structure of a business would be a huge help in keeping their business running smoothly in any type of devices they are using. At first Odoo platform has a website where you can access it through web servers but having an application kept the privacy intact and secured only within the enterprise environment.

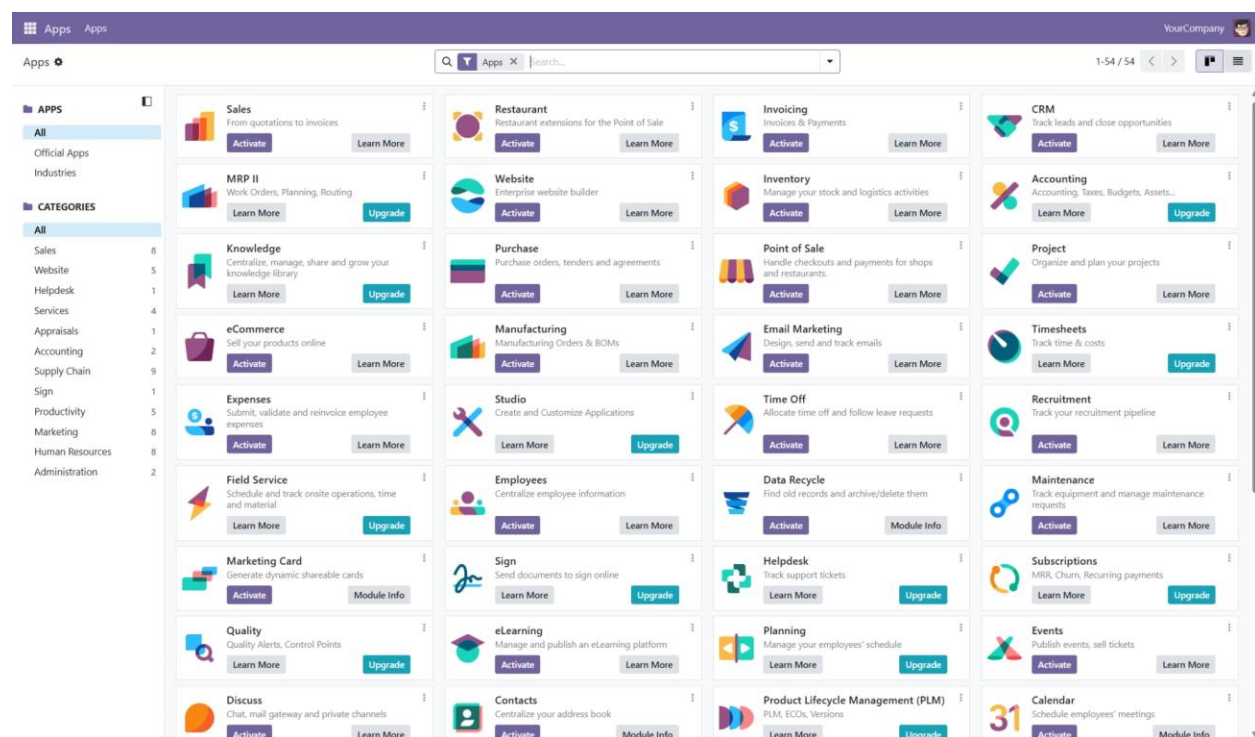

By downloading the Odoo application, it takes 45 minutes for me to finish installing this application that uses almost 200mb of my device storage which is an advantage for users who have not much high-end of a device to use this application.

The image shows the 'Create Database' screen of the Odoo application. It is a white dialog box with a close button (X) in the top right corner. The form contains several input fields: 'Master Password' with the value 'alizada\_2025', 'Database Name' with 'lizada\_odoo', 'Email' with 'alteromni25@gmail.com', 'Password' with masked dots, 'Phone Number' with '09489340261' (highlighted with a blue border), 'Language' with a dropdown set to 'English (US)', and 'Country' with a dropdown set to 'Philippines'. There is a 'Demo Data' checkbox which is checked. At the bottom, there is a blue 'Continue' button. A small text at the bottom states: 'To enhance your experience, some data may be sent to Odoo online services. See our [Privacy Policy](#).'

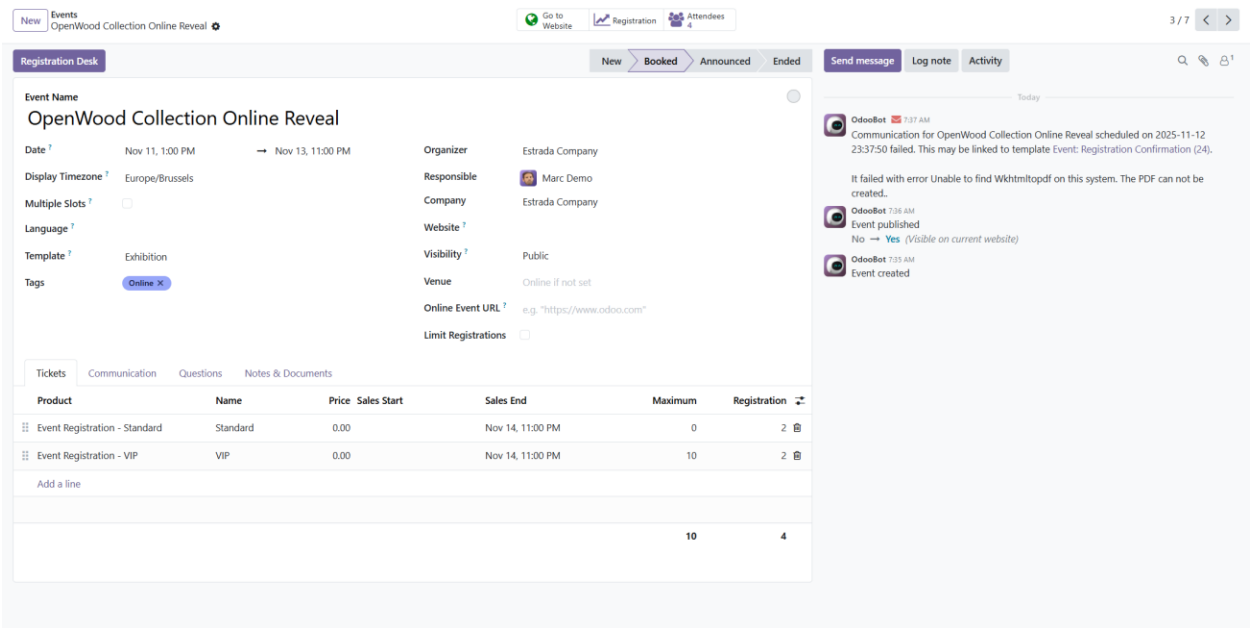

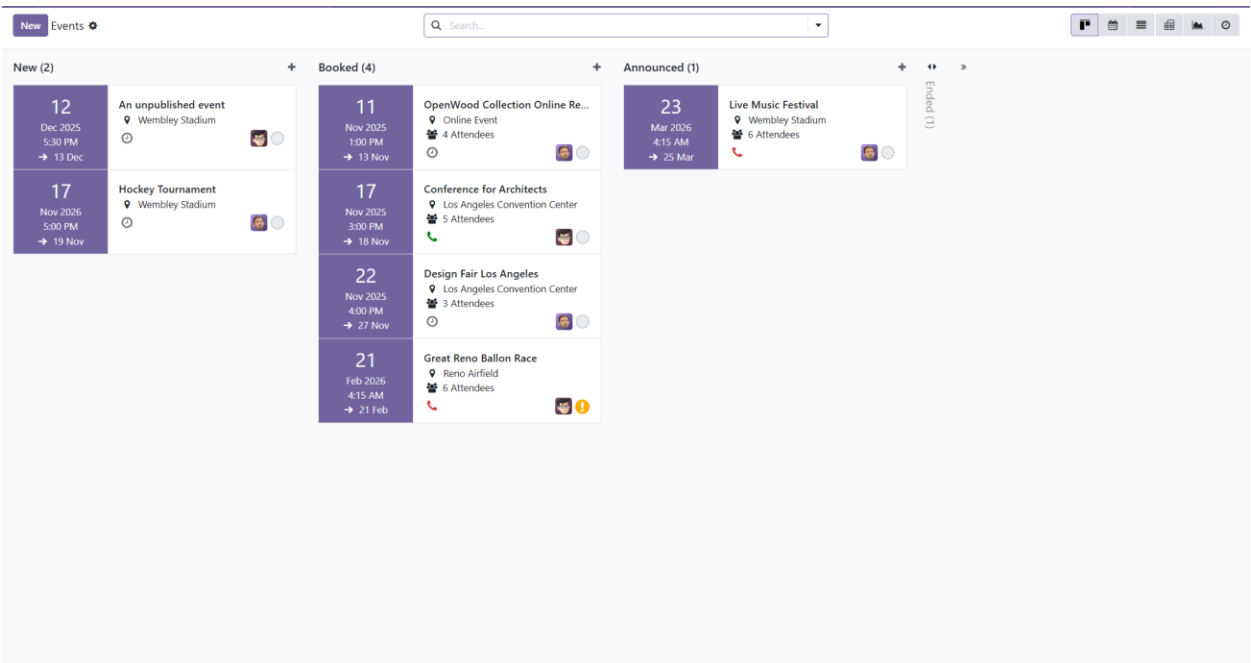

| Field           | Value                               |
|-----------------|-------------------------------------|
| Master Password | alizada_2025                        |
| Database Name   | lizada_odoo                         |
| Email           | alteromni25@gmail.com               |
| Password        | .....                               |
| Phone Number    | 09489340261                         |
| Language        | English (US)                        |
| Country         | Philippines                         |
| Demo Data       | <input checked="" type="checkbox"/> |

Focusing on the business perspective, by creating a new database under the name of the company, this became a step for securing our business in a one environment using the master password as the first security for keeping the database protected from suspicious account who wanted to interfere the company's database.

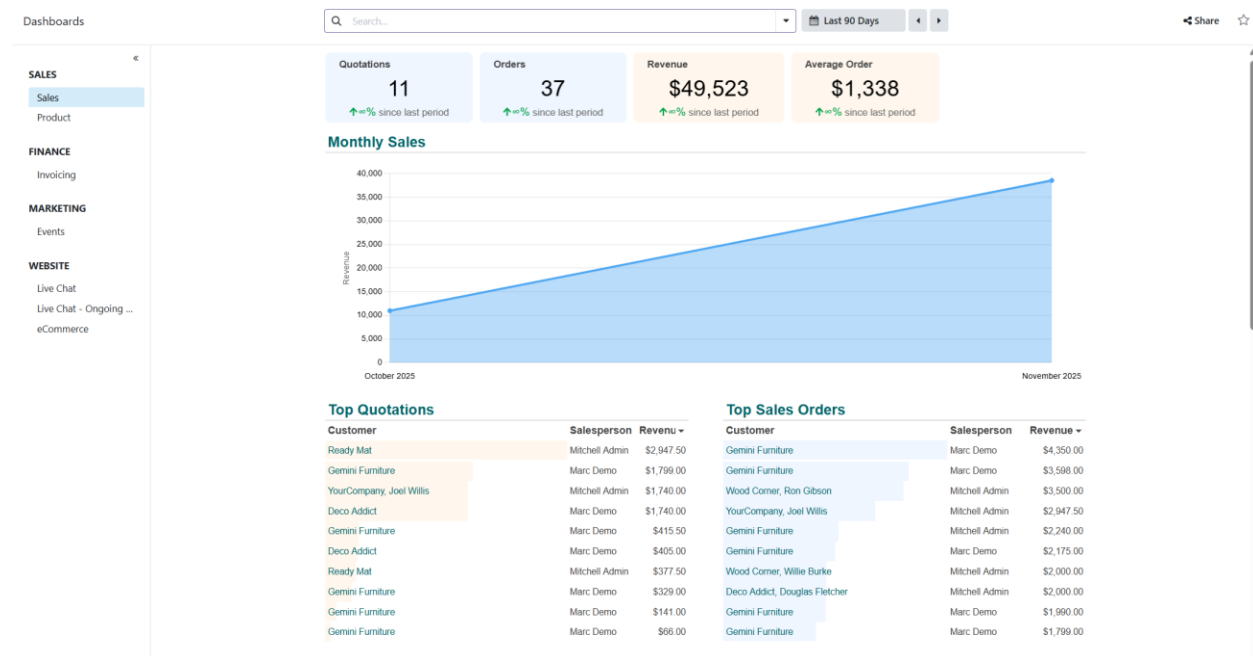

After successfully manage to create the procedure we would be viewing the first dashboard where you can see all the services that Odoo can offer to a business. Using the activate button, we can download this feature to be included in our own company's operation and by using upgrade- these where the modules that already been downloaded but the upgrade button were meant for user who already have a subscription to Odoo to much more wider range of features.

Besides of the other services that Odoo offers like for the business Sales, Marketing, Finance and Accounting, Manufacturing and other feature that can benefit the progress of a business and customer satisfaction, I tried downloading one feature, the Events feature that only takes a minute to finish. Events feature are the operation that a company organizes, like fair, bazaar and other events shop that will be showcasing under the company. This would provide the location of the events, number of attendees, date of this events, and all the transaction made to make an event possible.

This would become the main dashboard for business within the Odoo environment. It would track all the essential information from the monthly revenue, orders that had placed, top sales orders from the top sales customers. This dashboard is a basis for the overall status of the business besides of the individual modules with much more detailed information inside. It only serve as a primary preview of the entirety business standing.

Odoo platform is a complex ERP system that can manage an enterprise whether if its small growing business or huge enterprise handling thousands of customers worldwide. Having a free subscription is already a big help for small businesses and for upgrading would rely on the big enterprises to access more operations that can help them in the future. Learning this ERP system as a student, its like an adventure discovering new things and learning from it is a big help if a student wanted to understand much more about business or even developing a system for a company is recommended to be guided by this platform.
